# HOT WATER YOU CAN DEPEND ON

Precision engineered for efficiency and long life, Thermann is setting new standards for hot water systems in Australia. Packed with innovative features and proven technology, Thermann delivers the ultimate hot water experience everyday. What's more, Thermann is committed to total customer care, so you'll enjoy market-leading warranties and full after sales support for many years to come.

# ELECTRIC STORAGE SMALL HOT WATER SYSTEM

Thermann small Electric Storage hot water units allow you to install Hot water where space and access is restrictive. With its “V fit” configuration, inlets and outlets are configured for ease of installation. Available in ‘appliance white’ for a more aesthetically pleasing unit.

- 50L boasts a compact 670mm height, promoting its ability to fit into tight cupboards.
- V-Fit plumbing connections provide better access for easier installation
- Available in hard wired or plug in models.

# ELECTRIC LARGE HOT WATER SYSTEM

Thermann electric storage hot water units are an insulated storage vessel efficiently storing hot water, ready for use, when you need it. The Thermann range of electric water heaters offer solutions in eight different sizes to suit your needs.

## RANGE FEATURES

- Commercial grade enamel and a thicker anode
- Easy installation, with water connections on both sides of tank
- Full flow pressure to all outlets
- Australian made
- A hard-wearing tough polymer base resists damage and is rust proof
- 50mm thick, dense foam insulation for less heat loss and lower running costs
- Can be installed indoors or out

### Thermann twin element electric water heaters

Feature a secondary 'top' element, to heat an additional capacity of water to reduce the chance of running out. This is often referred to as a 'boost capacity', and can be continually heated as hot water is used.

#### TWIN ELEMENT FEATURES

- Cost effective - primary heating with off-peak and a continuous backup supply
- Flexible - ideal for varying hot water loads
- Limited tariffs - perfect for regions where extended off-peak tariffs are unavailable
- Space efficient - for when there's no room for a larger tank
- Fast hot water - the boost capacity can be heated (and reheated) quickly

# SMART ELECTRIC

## HOT WATER SYSTEM

Discover Thermann Smart Electric for ultimate hot water control and energy efficiency. With built-in Wi-Fi and the Thermann Control app, your customers will have greater control than ever before. Experience the future of hot water management.

### ALLOWS YOUR CUSTOMERS TO:

- Choose from four convenient modes: Manual, Eco, Holiday, and Schedule
- Track their energy use and power costs
- Schedule Mode: Schedule heating for optimal efficiency, e.g. when PV solar is available or power tariffs are lowest
- Manual Mode: Lower tank temperature to maximise savings, while keeping anti-legionella cycle
- Holiday Mode: Remotely turn the water heater on or off
- Eco Mode: Use machine learning to predict usage patterns for minimal energy consumption

**THERMANN**  
SMART ELECTRIC

# THE SMARTER INSTALL

Give your customers more control over their hot water, energy use, and power bill with our new app-enhanced electric range.

## Why will your customers love it?

The ultimate benefit of the units' smart features is their ability to reduce power use, and because of that, save your customers money. For customers with PV solar, common scenarios could see them saving between \$700 and \$1000 per year. And for those with a TOU tariff system, common scenario could see them saving around \$650 per year.\*

## Why will you love it?

Our new app-enhanced electric range has the same footprint, dimensions, and connection points as our other electric units, so it's easy for you to install. Plus, it can be installed with a restricted electrical license (just like our other electric units) so you don't need an electrician for your install.

\*Calculated based on specific operating conditions. Real-world savings may differ. See specific conditions on our website at [thermann.com.au/products/smart-electric-storage#disclaimer](https://thermann.com.au/products/smart-electric-storage#disclaimer)

# GAS STORAGE HOT WATER SYSTEM

The Thermann 4 Star Gas hot water heater can suit any family type. Gas storage hot water systems give you full mains pressure with a constant, strong stream of hot water. With an adjustable thermostat for safety and efficiency, it allows you to be in control of your operating costs and performance. The unit has a small footprint, similar to that of older square gas units, which makes it ideal upgrading to a higher efficiency model.

# CONTINUOUS FLOW G-SERIES

## HOT WATER SYSTEMS

The Thermann G-Series range features a new sleek gunmetal finish and boasts up to a 6.8\* star rating, making the G-Series one of the most efficient non-condensing continuous flow units on the Australian market. Backed with a 12 year heat exchanger & 3 year full parts & labour warranty, you can be rest assured that you are covered for the life of the unit. Available in 50°C & 60°C as well as NG & LPG, the refined Thermann G-Series is the perfect choice for your home.

## SPECIFICATIONS

\*6.8-star rating applies to 16L & 20L 50°C models at peak performance. 26L 50°C model will achieve up to a 6.7-star energy rating at peak performance.

# CONTINUOUS FLOW R-SERIES

## HOT WATER SYSTEMS

The R-Series range now includes the 17R, 21R, and 26R in 50°C and 60°C models in addition to the existing large capacity 32R model in 50°C and 60°C options. The range provides sizing options for applications big, small, and everything in between.

The 26R model is one of the most efficient non-condensing units on the market in Australia. It not only features an equivalent energy efficiency rating of 6.4 stars, but its low minimum flow rate makes it the perfect choice to combine with water efficient 6-star tapware.

# CONTINUOUS FLOW R-SERIES

## HOT WATER SYSTEMS

The R-Series has a full range of optional accessories available, including remote temperature controllers for precise temperature control, recess wall boxes for discreet installation in wall cavities, flue diverters for compliance and anti-theft brackets for added security.

Main Controller

Bathroom Controller 1

Bathroom Controller 2

Optional Accessories	Code
<b>Controllers</b>	
R-Series Main Controller	9507958
R-Series Bathroom 1 Controller	9507959
R-Series Bathroom 2 Controller	9507960
Commercial Controller - Suits 32L only (Internal controller)	9507385
Quick Connect cable (2m) - Suits 32L only (Must be used with Commercial controller when linking up to 2 units together)	1309044
<b>Recess Boxes</b>	
32R Half Recess Box	1309048
17R 21R 26R Half Recess Box	2571022
26R Full Recess Box	2571023
<b>Pipe Covers</b>	
17R 21R 26R Pipe Cover	2571026
32R Pipe Cover	1309045
<b>Flue Diverters</b>	
17R Side Flue Diverter	2571027
21R Side Flue Diverter	2571028
26R Side Flue Diverter	2571029
26R Side Flue Diverter - Long	2571030
32R Side Flue Diverter	1309047
32R Upward Flue Diverter	1309046

Note: All R-Series controllers come with a standard 10m cable.

\*Both the Quick Connect Cable & Commercial Controller are required when connecting two 32R units together.

Only a Commercial Remote is required when connecting a 32R unit to a circulating pump e.g. for applications with a ring main.

# LOW ENERGY USE IS A HIGH PRIORITY.

More and more households are trying to lower their energy use. That's why we're constantly developing innovative new technologies that heat water more efficiently.

## Split Heat Pump

Split heat pumps use heat from the outside air and transfer this to your water, reducing energy consumption and making them up to 80% more efficient than a standard electric storage hot water system.

## Electric Boosted Solar

This system uses the sun, a free and renewable energy source to heat your water and for those sunless days, there is a back-up electric element in the tank.

## C7 Continuous Flow Hot Water

The Thermann C7 utilises condensing technology allowing typically wasted heat from the gas exhaust to pre-heat the water, providing lower running costs and reduced carbon emissions.

# CONTINUOUS FLOW C7

## HOT WATER SYSTEM

The Thermann C7 high efficiency Gas Continuous Flow unit ensures you will have enough hot water, when you need it. This unit has been developed to reduce wasted energy by pre-heating the water using heat from the gas exhaust, meaning you'll use less energy. With a 12 year warranty, you can rest assured you are covered for the life of the unit, and optional universal controllers ensure you always have precise control of your hot water temperature settings. The unit is available as a 26L model in both NG and LPG to suit your gas type.

- Up to 15% more efficient\*
- Japanese technology and manufacture
- AGA approved
- Over 50 years of manufacturing experience
- Product quality guarantee
- Watermark approved
- Optional universal controllers available

Universal Controller (optional)

### HOW IT WORKS

DEVELOPED TO REDUCE WASTED ENERGY, THIS UNIT PRE-HEATS THE WATER USING HEAT FROM THE GAS EXHAUST, MEANING YOU'LL USE LESS ENERGY.

### THE PROCESS

1. A hot water tap is turned on
2. Water enters the heater
3. The water flow sensor detects the water flow
4. The computer automatically ignites the burner
5. Water circulates through the heat exchanger
6. The heat exchanger heats the water to the designated temperature
7. When the tap is turned off, the unit shuts down

\*Thermann model 26NG50C when compared to 26NG50, based on comparative energy consumption when tested to AS 4552.

\*\*AS 4552 limits the rating shown on the energy label to 6.0 Stars. Where the calculated rating exceeds 6.0 Stars it is designated as an "equivalent" rating.

# EVACUATED TUBE SOLAR ELECTRIC BOOSTED

Thermann Evacuated Tube Solar electric boosted systems harness the sun's energy to heat your water. An electric element in the tank provides back up if needed, ensuring peace of mind, whilst also reducing your running costs and environmental footprint.

# EVACUATED TUBE SOLAR

## HOW IT WORKS

### ELECTRIC SETUP

Electric Booster

Note: Diagram not to scale - basic system overview (not installation guide).

### STEP 1

The sunlight strikes the dark absorber coating inside the tube.

### STEP 2

The heat pipe transfers the heat up to the copper header pipe location in the insulated manifold box.

### STEP 3

A circulator moves water from the storage tank to the copper pipe warming the water. The solar heated water is then pushed down into the storage tank for use. Anti-frost is built in to the Thermann system to ensure solar hot water can be provided even in cold regions.

### PASSIVE SUN TRACKING

The round tube design of the system passively tracks the sun throughout the day giving the highest possible performance from early morning through to late afternoon.

# HYBRID HEAT PUMP

## HOT WATER SYSTEM

Engineered in Germany for Australian conditions, the **Hybrid Heat Pump** extracts heat from ambient air and quietly transfers it to heat water. It comes with a removable casing for easy cleaning and servicing where access is limited. With a built in manual element boost, for high demand conditions, and Solar PV ready it truly is the smart way to heat your water.

- Operates from -5°C to 42°C
- Manual booster element for high demands
- Smart grid and solar PV-ready
- Quiet operation at 45dB

1. A fan draws air through an evaporator. Thermal energy within the air is transferred to a liquid refrigerant causing it to change into a gas.
2. The refrigerant gas is then drawn into a compressor which increases the pressure and as a result increases the temperature.
3. A condenser then transports the hot gas refrigerant around the outside of the water tank. This heats the water inside the tank and the gaseous refrigerant reverts into a liquid.
4. The pressure of the refrigerant is reduced as it goes through an expansion valve and returns to the evaporator for the process to start again.

# SPLIT HEAT PUMP HOT WATER SYSTEM

Combining Japanese and Australian engineering, The **Split Heat pump** is a flexible, quiet, and highly efficient hot water solution for any climate. By extracting heat from the air, this clever system uses a naturally occurring gas to heat water making it up to 80% more efficient than that of a standard electric storage system.

- Highly efficient unit allowing for running cost savings
- Flexible installation options, ideal for installs with limited space
- Whisper quiet operation, 37dB
- Fast recover rate
- Uses natural refrigerant which is ozone friendly
- Delivers mains pressure hot water

## SPECIFICATIONS

### Heat Pump unit

Specifications	
Refrigerant type	R744 (CO <sub>2</sub> )
Seasonal Coefficient of Performance	5.08
Setting outlet water temp	65 °c
Product weight	48 kg
Rated capacity	4.5 kW
Max. power Input	2.5kW
Max. current	11A
Max. voltage	240v
Design pressure (High/Low)	14/9 MPa
Protection raining Class	IPX4
Max. operating water pressure	850 kPa
Operating Range	-10 to +43
Operating Noise	37dB
Rated power consumption	0.95kW/h

### Selecting the right unit for you

# SPLIT HEAT PUMP

## HOW IT WORKS

1. Water from the main fills the storage tank with cold water.
2. Water is drawn from the tank into the heat pump unit
3. A fan forces air through an evaporator where the heat from the air is transferred to a natural refrigerant gas.
4. The heated gas is then circulated around a compressor to be pressurised. This pressurisation causes the temperature of the gas to significantly rise.
5. The hot gas passes through a heat exchanger to heat the cold water, which is then pumped back into the top of the storage tank ready to use.
